- Johnson & Johnson
- Northrop Grumman
- DHL
- JCPenney
- Best Buy
- BNSF Railway
- Ports of LA/LB
- Pepsi

Reaching deep into the supply chain and each of the transportation modes, TranSystems has built a seamless business structure that integrates supply chain and logistics solutions into real estate and facility requirements.

TranSystems applies this broad discipline and business sector expertise to the science and art of the movement of goods, both inside and outside the warehouse or distribution center “box,” including location analysis, warehouse handling systems, transportation analysis, energy efficiency analysis, site assessment and development, complete architectural and engineering services and security consulting services.

This expertise in the multiple modes of goods movement – freight rail, trucking, ports, aviation and shipping – puts it on track to identify and execute innovative solutions leveraging modal interoperability. Typical projects include multi-modal shipping facilities, marine and inland terminals, logistics-based business parks and regional terminals that connect multiple facilities with rail and other infrastructure.

This combination of these factors provides an unmatched ability to identify and meet client needs for solutions across the entire set of strategic, design, technical and operational issues facing these sectors today. Because we master the smallest detail, no one envisions the big picture – your big picture – better than TranSystems. Our ability to meet the continuum of transportation challenges facing our clients anywhere in the world rests firmly on the range of modal expertise, technical disciplines and consulting services we have gathered into one integrated business entity.
